Andre Villanueva
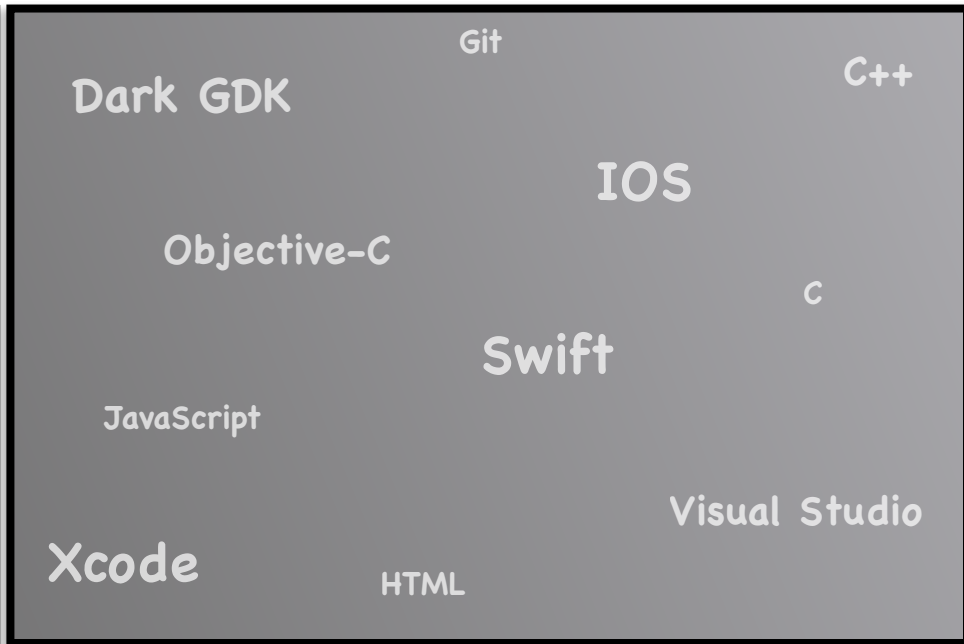

IOS Programmer

SKILLS:

- App Prototyping
- Testing
- Debugging
- Documentation
- MVC Pattern
- Analytics
- Source Control
- Crash Reporting
- User Interface Design
- Full Software Development Cycle
- Object Oriented Programming

Git
Dark GDK
C++
IOS
Objective-C
C
Swift
JavaScript
Visual Studio
Xcode
HTML

This resume is a brief reference of the skills and knowledge, that I have   accumulated these past 5 years since I have picked up programming. I have yet to release an app, but I do have 5 years of diligently studying on what ever I felt or learned as necessary skills to be a contributing developer. At the same time I've created several apps that expanded my skills, and deepened my programming knowledge, which gives me confident that I can come onto a team and contribute.

OBJECTIVE

My objective is to find employment within an IOS App development team/organization where I can contribute, gain experience, and meet more like minded people, while gaining experience and advancing my skill set. I would like to become a vital part of the company where we can push our limits as I love to push mines to reach points beyond expected.

WHO AM I

I am Andre, the self taught programmer. I currently have no professional experience. However, I know that I can be an affordable/valuable asset to a team in need of a junior IOS developer. I've created multiple unreleased apps/games over the years.

I've at minimum created a strong understanding for the programming language concept. I am ready to use the knowledge and skills I have gained to join a team with an idea and plan where I can naturally use my meticulous ways to contribute and become a valuable asset.

WHAT I DO WELL

As a self taught programmer who's worked on multiple projects independently I have become familiar with the full lice-cycle of app software development.

Apart from familiarity with the whole life cycle of an app, my strongest attributes are my passion, initiative, and natural ability to be self motivated I typically pick up on things easy with good instructions. I'm confident and relentless when it comes to solving a problem. I understand taking a step back and trying things from a different angle or using all together a different method.

Most importantly I'm passionate and obsessed with coding and creating quality and innovative software. I enjoy learning, so picking up new skills is rewarding.

CORE SKILLS MATRIX

Swift	2014-2015	1 Years
C++	2010-2013	3 Years
OBJECTIVE-C	2012-2015	3 Years
C	2011	1 Years
HTML/ JAVASCRIPT	2015	0

SOURCE OF EDUCATION:

- Have read dozens of books on the programming subject and related subjects
- Attended meet-ups/conferences(Began summer of 2015)
- Online tutorials written/video: Ray Wenderlich, Eli The Computer Guy, and more
- Watched college courses programming lectures: Stanford University
- Read multiple articles per week:Natasha Robot, Ray Wenderlich, IOS dev weekly, and more
- Learn from others on Github
- Following prestigious developers on multiple social networks
- Follows multiple podcast: "The RayWenderlich.com Podcast", "SwiftJitsu", "Debug", "Vea Software"
- Heavy-experience/trial & error/practice were gained through the few Apps I spent thousands of hours creating. over the years

A BIT ABOUT ME

I discovered programming in 2010 and been in love ever since. Currently in 2015 programming has taken up all of my free time and It's what I absolutely want to do. Programmers aren't made, they're born. This was clear as I compiled my first "hello world" project.

I've spent all of my programming life figuring out this profound, world mostly on my own. I enjoy taking an idea and making it real. My life is centered around staying in the loop and becoming a better developer.

Other interest include psychology and neurology. Just as I have this crave to understand computers and language, I also like to educate myself on the human mind on various subjects.

I consider myself a cerebral person with an inquisitive nature. I've always been ambitious and diligent when it comes to my work. I enjoy learning and over achieving. I pick up things easily and I'm open to constructive criticism. as well as doing things in a new and/or different way.

"Controlling complexity is the essence of computer"programming."— Brian Kernighan
